

Forklift Fork Positioners

Forklift Fork Positioner - The fork positioner is actually a hydraulic apparatus which allows the the one driving to work the lift truck without leaving the seat. They are constructed out of top quality materials and are meant to withstand the most difficult operations and work surroundings. Side shifting units have the added ability to laterally position the entire load or the arms so as to facilitate much more exact carrying and position in a quicker and much more effective method.

The only one of its kind fork pocket design enables the one operating it to be able to safely swing the unit's blades without any fear of destroying the positioning cylinders. This can allow the operator the choice to either perform simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into fork positioners on existing units.
